

Instructions for Flat Seat

The first photo shows the hardware that should have been included in your hardware pack.

Place one nut (non loc nut) and one washer on both ends of the brackets before placing them on the seat as shown in photo #2.

Insert the bracket into the holes on each side of the seat as shown in photo #3.

Once the bracket is on the seat you will need to place the flat bracket piece on each side then place another washer and the loc nut to each end of the bracket as shown in photo#4 The flat bracket may or may not fit down into the molded part of the seat. You will need to tighten the hardware and as you do the bracket will move into place. You will need to use a ratchet to tighten the bolts. This will not cause any damage to the seat.

Once assembled you're your seat should like photos 5 and 6.
